Introduction

Overview

Thank you for purchasing LevelOne KVM-9007 Cat.5 receiver. KVM-9007 enables user to access the PC, server or KVM switch up to 300 meters away from your keyboard, VGA (monitor) and mouse. It receives the signals from Cat.5 cable and converts them into signals of USB keyboard, VGA and USB mouse respectively.

KVM-9007 can be used with either KVM switch that has built-in remote console port or Cat.5 dongle. When working with KVM switch that has built-in remote console port (KVM-0830 / 1630), users are able to access KVM switch and control all the PCs which connected to the KVM switch from 300 meters away. When working with a Cat.5 dongle (ACC-3000), KVM-9007 enables user to control a single PC, server or standard KVM switch remotely.

KVM-9007 is a good solution for those noisy server room environment where is unsuitable for people to work for a long time. Besides, it facilitates effective management on dispersive computers through one dedicated central control room, demonstration room, meeting room, or at your desk.

Features

- KVM Cat.5/Cat.5e/Cat.6 signal receiver from remote located KVM switches
- Extends, transmits and receives KVM Cat.5 signals from up to 300 meters (1000 feet) away
- Designed for application with KVM switches with built-in remote console port
- Built-in local host-port to manage an additional computer directly connected
- Easy installation with no additional software required

Note:

It is highly recommended to use Cat.5e cable when the connection is shorter than 150 meters, and to use Cat.6 cable when the connection is between 150 and 300 meters.

Package Contents

- KVM-9007
- Power Adapter DC9V 0.5A
- Four Rubber Foot pad
- User Maunal

If any item is found missing or damaged, please contact your local reseller for replacement.

Front Panel

Console Port: Connect USB keyboard and mouse.

Remote LED

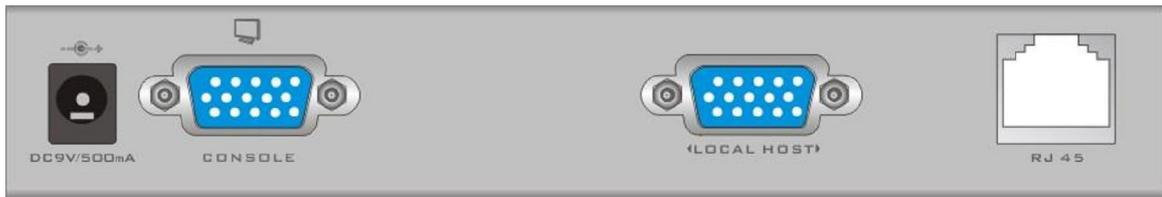

LED display	Indication
Light off	Remote port is not selected
Light on	Remote port is selected
Light flash	Auto detecting device on remote port

Light flash	Auto detecting device on local port

Select Button: Select between local and remote side.

Rear Panel

DC power jack: Connect power adapter.

Console port: Connect to local monitor.

Local port: Connect to local host PC.

RJ-45 port: Connect to remote KVM switch or servers over Cat.5 cable.

Installation

Connect to KVM switch with built-in console port

1. Attach the rubber feet to the bottom of KVM-9007.
2. Connect keyboard, VGA and mouse to the console port.
3. If you want to add a local PC, connect local PC to the local host port with 3 to 1 KVM cable(ACC-2101 / 2102 / 2103).
4. Connect one end of Cat.5 cable to the RJ-45 jack of KVM-9007.
5. Connect the other end of Cat.5 cable to the remote console port of the KVM switch (KVM-0830 / 1630).
6. Connect the power adapter to the power jack on the rear panel, and the other side of power adapter connects to the power outlet.

Connect to standard KVM or single PC/server

1. Attach the rubber feet to the bottom of KVM-9007.
2. Connect keyboard, VGA and mouse to the console port.
3. If you want to add a local PC, connect local PC to the local host port with 3 to 1 KVM cable.
4. Connect ACC-3000 Cat.5 dongle to the KVM switch or PC/server you want to control.
5. Connect one end of Cat.5 cable to the RJ-45 jack of KVM-9007.
6. Connect the other end of Cat.5 cable to the ACC-3000 Cat.5 dongle.
7. Connect the power adapter to the power jack on the rear panel, and the other side of power adapter connects to the power outlet.

OSD

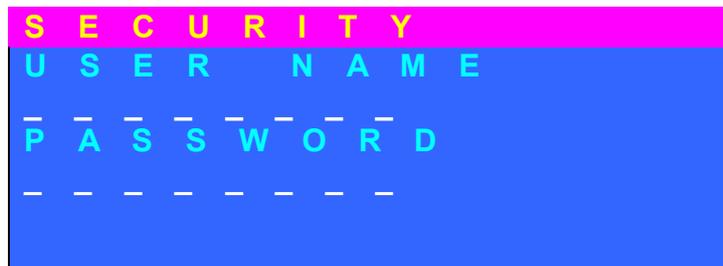

On screen display (OSD) gives you a convenient way to access and control the computers. It includes management functions such as security, language and help etc.

Press “optional hotkey” twice then press letter 【B】

8. Scan PC port

(scan Local port and Remote port VGA every 8 seconds)

Press “optional hotkey” twice then press letter 【S】

Troubleshooting

1. No video signal is displayed on the monitor.

Please check if VGA cable and Cat.5 cable are properly connected to the connectors respectively.

Make sure VGA cable is attached to computer during the boot-up process.

Make sure power adapter is connected to the receiver.

2. Video signal is foggy or un-cleared on the screen.

Please check if the VGA cable is properly connected. Sometimes reconnect the cable may solve this problem.

It is highly recommended to use Cat.5e cable when the connection is shorter than 150 meters, and to use Cat.6 cable when the connection is between 150 and 300 meters.

Specifications

Keyboard port	USB
Mouse port	USB
VGA monitor port	1
